I was thinking about CV driven development but apparently we are plenty agreeing this is clearly something that should be fixed. I'll add to the list premature abstractions, related to the lack of understanding of the necessity of context separation (DDD BC)

To be more precise : matrix orgs do not build long lived teams but use resource pools to maximize utilisation and even when one manager tries, essential skills are not under her control (e.g. unable to book a full time dev for a few months)

Lack of professionalism.

Lack of ethics.

Professionals with no skin in the game but always an opinion on what people should do.

In 3 points :

- No focus, target should always be first
- Incapable to put the goal before one self or what is liked
- we hide behind pragmatism or business value to not do our job : construct, operate and maintain systems.

François Royer @FrancoisRoyer · Apr 5

Expert interested in only one technology/langage

Architect that do not code

CV Driven Development (aka buzzword everywhere)

Developper that do not want to use Resharper (Really?!)

Focus on writing instead of reading, knowing our own History, the old new things, technology driven startup, empathy, explaining buzzwords...

use case driven @tpierrain · Apr 4
